Husum, 7th October 2021

Energy Coast - Showroom for Green Energy

The sustainable future at EXPO REAL 2021

Real green energy is the must-have of the present, in order to operate sustainably in the long term. How to successfully build a completely climate-neutral energy system will be demonstrated by the pioneer region "Energy Coast" at EXPO REAL from 11th to 13th October 2021, Munich Fair. The umbrella brand of Germany's unique future location for renewable energies presents highly innovative projects for real green energy - from generation to sector coupling and hydrogen to mobility and heat. "Whether a sustainable quarter or a data centre powered by real green electricity - the location on the Schleswig-Holstein North Sea coast offers the international investor public extraordinarily promising opportunities," says Kirsten Voss, project and marketing manager of the "Energy Coast". In the new energetic look, matching the creative doer-mentality of the region, the "Energy Coast" invites visitors to exchange ideas and network at the Schleswig-Holstein stand in Hall B2, Stand 330.

Talking with politicians and players

Dr. Bernd Buchholz, Minister of Economics, Transport, Labour, Technology and Tourism of the State of Schleswig-Holstein, will talk about "Development lines of the 'Energy Coast'" on 11th October, 2.45 pm. The sustainable talk round with Kirsten Voss, Dr. Matthias Hüppauff, Managing Director of Wirtschaftsförderungsgesellschaft Nordfriesland mbH, and Annette Fröhlingdorf, Regional Manager of the "Energy Coast", will take place in the event area of the stand. Parallel to another round of talks on 12th October, among others with Prof. Dipl. Ing. Phillip Goltermann of the TH-Lübeck, the "Energy Coast" presents successful actors of the real North. For example Wilfried Ritter, Managing Director of windcloud 4.0, will give an interesting talk on the topic of "Schleswig-Holstein's green gold: challenges of renewable energies and digital solutions that also save the climate". "We are very pleased that Dr. Buchholz is supporting us again in Munich after the for the 'Energy Coast' extremely successful HUSUM Wind," says Annette Fröhlingdorf.

Powerful concepts from Hamburg to Sylt

Think big - for a rapid energy turnaround, the "Energy Coast" wants to exploit the unique potential of the region even better. New companies, researchers, creative minds and skilled workers from all over Germany and Europe are to find a home in the future location. The surplus green energy on the "Energy Coast" is the basis for new value creation in a wide variety of areas - from sustainable mobility and big data to power-to-X and energy-intensive industries. Whether floating solar parks or ecological housing construction, the region rolls out the red carpet for decarbonisation. Schleswig-Holstein's West Coast offers targeted policy, research and funding for all stakeholders around renewable energy. Here you will find partnerships across all sectors, a wide-ranging, hands-on scene. "Don't talk, do" is the motto on the coast, as numerous projects prove.

Energy Coast Partners and projects

Since its founding in 2020, the "Energy Coast" has grown into an important platform for harnessing synergies, pooling strengths and thus driving forward the expansion of renewable energies. Highlights here include the hydrogen mobility project eFarm, the offshore hydrogen project AquaVentus on Helgoland, Customcells, the world's leading developer of lithium-ion battery cells, and Fraunhofer IFAM with the Helgoland Test Centre for Maritime Technologies. Newcomers to the "Energy Coast" include SunOyster GmbH with its clever solar products that also keep you cool, Inselwerk Föhr-Amrum GmbH with its sustainable island energy project and Breezer Aircraft GmbH & Co. KG, which is building an additional production facility and competence centre in Bredstedt. Alternative propulsion systems for Breezer Aircraft's aircraft will also be developed here, preferably with hydrogen, of course.

About the Energy Coast

The Schleswig-Holstein North Sea coast is Germany's future location for renewable energies. Experts, researchers, creative minds and energy enthusiasts are shaping a highly innovative energy system from existing resources here. To bundle their know-how, the districts of North Friesland, Dithmarschen, Steinburg and Pinneberg founded the umbrella brand and platform "Energy Coast". The aim of the districts, which have joined together to form the West Coast Regional Cooperation and are regarded as incubators for innovations in the field of renewable energies, is to strengthen the existing economy, attract new companies and skilled workers, and create a concise image for the business location. The "Energy Coast" is financed with funds from the West Coast Regional Budget, supported by the state programme Economy, and the four districts of the West Coast Regional Cooperation. Further information is available at www.energiekueste.de.
